† p-values are Bonferroni-corrected ($\alpha = 0.05/3 = 0.017$)
* $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$, ns = not significant
Mann-Whitney U test for significance, Cliff's δ for non-parametric effect size
Cliff's δ : $|\delta| < 0.147$ = negligible, < 0.33 = small, < 0.474 = medium, ≥ 0.474 = large
